PLISSÉ Insect-screen for Doors-Windows

Plissé represents a true revolution in the field of horizontal Insect Screens for doors and windows and wide openings, thanks to 4 fundamental characteristics which distinguish it from all other Insect Screen systems:

- pleated screen
- ideal for handicapped access and old people because of its simple glide rail at floor level
- the screen returns smoothly into the cassette without spring action
- the limited number of components and the simple operations necessary for mounting, make the installation extremely simple and quick, but effective!
